

On 06/01/2024 Teva discontinued distribution of the Digihaler® products in the US [ProAir® Digihaler® (albuterol sulfate) Inhalation Powder, ArmonAir® Digihaler® (fluticasone propionate) Inhalation Powder, AirDuo® Digihaler® (fluticasone propionate and salmeterol) Inhalation Powder]. As of June 1, 2024, the Digihaler app and dashboard are not available for patients and HCPs. Patients should no longer access the app for their data and should delete the app from their phone. Patients can save data that are already in the app if they would like.

However, people who already have and are using Digihaler inhalers can continue using them as prescribed until their expiration date. As a reminder, the Prescribing Information for all the Digihaler inhalers states, use of the app is not required for administration of medication from the device to the patient. Patients can still use the inhalers without accompanying app. There is no evidence the use of the app leads to improved clinical outcomes, including safety and effectiveness. As of 06/01/2024, the Digihaler app and dashboard are not available for patients and HCPs. Patients should no longer access the app for their data and should delete the app from their phones.

### How to save Digihaler app data?

Tap **Data** at the bottom of your screen. You can see the details of your Digihaler events for each registered inhaler.

Since Digihaler inhalers are not available after 06/01/2024, patients and healthcare providers should consider appropriate therapeutic alternatives instead of prescribing and purchasing new Digihalers.

ProAir RespiClick (albuterol sulfate) Inhalation Powder and AirDuo RespiClick (fluticasone propionate and salmeterol) Inhalation Powder will continue to be available. These medications from Teva have the same formulation and device as their corresponding Digihaler versions, but do not have digital sensors or connectivity to an app or dashboard. There are also other alternatives available in the ProAir family of inhalers such as Albuterol Sulfate HFA Inhalation Aerosol. Teva currently has no marketed alternative inhaler products to substitute for ArmonAir Digihaler. However, fluticasone propionate inhalers, as branded or generic medications, are available through other manufacturers.

Please see full Prescribing Information for [ProAir Digihaler](#) and for [AirDuo Digihaler](#) and for [ArmonAir Digihaler](#).
